**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-13, drawn to an organic electroluminescent display device, classified in class 313, subclass 504.
  - II. Claims 14-23, drawn to a method of manufacturing an organic electroluminescent display device, classified in class 445, subclass 24.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the organic electroluminescent device can be made by forming an electrical connecting pattern on a first sacrificial layer, the electrical connecting pattern being formed of material having a plastic deformation property; forming an array element layer on the electrical connecting pattern; forming a first substrate on the array element layer on which a plurality of sub-pixels are defined, the array element having a plurality of thin film transistors corresponding to each sub-pixel and the electrical connecting pattern having a first height corresponding to each sub-pixel; forming an organic electroluminescent diode on a second sacrificial layer, the organic electroluminescent diode having first and second electrodes and an organic light-emitting layer between the first and second electrodes; forming a second substrate

on the organic electroluminescent diode; removing the first and the second sacrificial layers; forming a seal pattern on one of the first and second substrates; and attaching the first and second substrates together, wherein the first height of the electrical connecting pattern is reduced to a second height by applying a plastic deformation force to the electrical connecting pattern during the step of attaching the first and second substrates.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Robert Goodell on 10 May 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2879

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
